Overview:

The purpose of this document is to discuss the GM330 Accessory kit. What is included in the kit including part numbers. The Accessory kit does not include the GM330 Time Server which is sold separately.

The kit includes a surge protector for outdoor deployment. The cables were selected with the right connectors to mate with this surge protector. This is the recommended way to install the antenna. The GM330 is then protected from voltage spikes and surges caused by weather and other extraneous circumstances.

There is another option if deploying in an area that already has a surge protector or for demo purposes the antenna and cable SMA (Male) to N (Male) can be purchased separately.

The kit includes a dual-frequency L1 + L5 Bullet 720 antenna and mounting brackets.
